Nukus State Pedagogical Institute, Faculty of Foreign Languages, interfaculty teacher of foreign languages

### **Abstract:**

Promoting pedagogical skills in the family is a very difficult task, which is explained by the age of parents, educational experience, differences in professions, diversity of worldviews. The main basis of pedagogical skills is professional knowledge. The content of such knowledge includes knowledge of pedagogy and psychology of the methodology of the content of the taught science.

### **Keywords:**

teacher, student, skill, technique, feature, continuing education.

### **Introduction**

The complexity of a teacher's job is that he or she will need to be able to influence, interact with, and guide students in the process of teaching and educating the student. The teacher must take into account the personal characteristics, age, marital status, intellectual abilities of students and ensure their perfect, mature, all-round development.

In order to achieve pedagogical skills, a teacher must have: the ability to generalize pedagogical tactics and events, the ability to manage their own and students' activities, high knowledge, skills and abilities.

The object of a teacher's work is a child, a student, who is constantly changing, developing and improving. This means that teachers need to be constantly researched and creatively approached to their profession.

Requirements for knowledge, skills and abilities of students:

a teacher's educational tool is a variety of student activities: play, study, work, and communication. It is also important that the teacher acquires the skills and abilities to influence students in the above activities.

This requires the student to understand the humanities of pedagogical activity and feel it with all his heart. It means that the student is responsible not only to the parents but also to the society, the homeland and the nation for the upbringing of the children during the lectures. Theoretical and practical classes provide students with in-depth knowledge of their

professional knowledge, as well as communication needs with students. Upbringing is a great work: upbringing solves human destiny. V.G.Belinskiy

Promoting pedagogical skills in the system of secondary special vocational education is one of the most important tasks. Because this group of the education system of our republic is in the most needy.

Along with the use of practical, oral, demonstrative forms of popularization of pedagogical skills in this type of continuing education, it is important to spread the skill school created by advanced, experienced teachers in the regional and national media. The importance of this method of motivation is that it is an example for a less experienced teacher and an incentive for an advanced teacher. It is much easier to spread the secrets of pedagogical skills in secondary special vocational schools, where there is a great deal of scientific, educational and pedagogical experience in this field. However, it is no secret that there are teachers who do not understand that pedagogical skill is a social experience, do not know how to work at home, or do not want to.

In the postgraduate period, the secrets of pedagogical skills are mastered by postgraduate and doctoral students and researchers in the process of popularization of their chosen topics in one or another type of education, in which their leaders and advisors play a leading role.

The advantage of the system of professional development and retraining in this area is that this type of education system is directly engaged in the study, promotion and dissemination of the secrets of pedagogical skills.

Promoting pedagogical skills in the family is an extremely difficult task, due to the young age of parents, educational experience, differences in professions, and diversity of worldviews.

The main basis of pedagogical skills is professional knowledge. The content of such knowledge includes knowledge of pedagogy and psychology of the methodology of the content of the taught science. Therefore, the Law of the Republic of Uzbekistan "On Education" (Article 5) states: has Compliance with the requirements of the Law "On Education" is to increase the effectiveness of pedagogical activities. This means that it takes time to develop pedagogical skills in future teachers.

The teaching profession is honorable and unique, and it is difficult to be a good educator

without mastering pedagogical skills. The subject of pedagogical skills is the sum of practical and theoretical knowledge of advanced teachers and scientists. Oriental pedagogy and pedagogical skills have a thousand-year history. p, contains valuable masterpieces.

In the 15th century, the famous writer Hussein Waz Kashifi, who lived in Herat, called the place where the sermon (lecture) was delivered "the place of maraka" and asked, "What is the basis of maraka?" The answer to the question is "to give and receive interest." To the question, "What qualities should a celebrant have?" be open-faced and smile; Second, make their movements light and pleasant; Third; let him not speak sarcastically, let him pray for all, and let him show his skill. " Another famous thinker was Jalaliddin Rumi, who was originally from Khorezm. Not only madrassa students, but also kings and scholars from other countries listened to his sermons. His contemporaries praised his eloquence, saying that "his beautiful voice captured the world and gave life to souls." Some studies in recent years have shown that Rumi was also a mature, unparalleled psychologist.

Pedagogical skills are mainly reflected in the work of the teacher. In order to achieve pedagogical skills in their work, a teacher needs to have a special ability to generalize, the ability to manage their own and students' activities, a high level of knowledge, sufficient skills and abilities.

After gaining independence, our country faces the task of training highly qualified specialists who will consciously fight for the development of a new-minded republic in a very short period of time. As a result, the laws "On Education" and "National Training Program" were adopted. In-depth knowledge alone is not enough to form a mature professional and a new thinker.

Pedagogical skills include the following components:

- The predominance of humanity in teaching;
- pedagogical talent and ability;
- pedagogical techniques (art);
- personal aspirations of the teacher.

Pedagogical technique is one of the main parts of pedagogical skills, it requires the teacher to quickly and clearly find the necessary words, tone of voice, look, gestures when dealing with students, calmness and clear thinking in the most acute and unexpected pedagogical situations, allows you to save the ability to analyze. In a real pedagogical impact,

all the skills of the teacher in the field of pedagogical techniques are clearly visible at the same time. It is accompanied by speech, gestures, facial expressions, and movement. Pedagogical technique is based on the individual psycho-physiological characteristics of the teacher. Individual pedagogical techniques also depend on the gender, age, client, behavior, anatomical and psychological characteristics of the teacher.
